

CMT LEVEL II 2019 Learning Objective Statements

Stanley Dash, CMT CMT Program Director

Level II. Theory and Analysis

Section One: Chart Development and Analysis

1 Charting

Explain the six basic tenets of Dow Theory Diagram the three phases of bull and bear markets Differentiate between primary, secondary, and minor trends Examine a chart for support and resistance Demonstrate the use of trendlines in identifying trends, support and resistance, and channels Interpret trend signals using trendlines Compare different types of gaps and their significance Contrast various continuation patterns and reversal patterns Draw examples of various top formations and bottom formations Apply price objectives to various chart pattern and trend breakouts Interpret candlestick formations for signals

2 Moving Averages

Contrast various types of moving averages used in trend analysis Illustrate four ways moving averages are used by technicians Analyze trend movement using Directional Movement Indicators Compare common envelope, channel, and band indicators

3 Time-Based Trend Calculations

Examine methods for forecasting price direction Calculate a simple approach to momentum Inventory various weighting methods for moving averages Explain the drop-off effect and its impact on technical indicators

4 Trend Systems Part 1

Explain three reasons why trend systems work

Determine appropriate asset selections based on trend and forecast

Generalize how buy and sell signals are used with indicators and tools for measuring trend, such as: Moving Averages, Bollinger Bands, Keltner Channels, Percentage Bands, Volatility Bands, and combinations of bands and other indicators

Describe how to apply the 10-day moving average rule in a trading system

5 Trend Systems Part 2

Explain how a trader or investor would go about selecting the right moving average to use Explain the role of each moving average in a two-trend or three-trend method of trading Describe two general rules for generating an exit signal when using moving averages, and explain which one of the two is considered better than the other

6 Momentum and Oscillators

Differentiate between momentum and rate of change studies in technical analysis Distinguish among various calculations of momentum Demonstrate use of momentum for trend indication and associated signals Demonstrate use of momentum for finding price extremes and associated signals Illustrate the use of MACD to generate trading signals Compare various oscillators and their trading signals including RSI, stochastics and TRIX

7 Volume, Open Interest, and Breadth

Use standard interpretation of volume and open interest in the context of price trends in stocks and futures Compare various volume indicators such as On-Balance Volume, Accumulation Distribution and VWAP Analyze changes in breadth in the context of price trends Interpret breadth indicators such as the McClellan Oscillator Interpret indicators that combine breadth with volume such as Arms Index and Thrust Oscillator

8 Bar Chart Patterns

Critique the controversy over whether tradeable patterns exist in technical analysis Appraise the influence that computer technology has had on the study of patterns Diagram classic chart patterns such as triangles, and double and triple tops and bottoms Draw rounding chart patterns such as head-and-shoulders Illustrate "half-mast" chart patterns such as flags and pennants Demonstrate methods for determining price objectives from patterns

9 Short Term Patterns

Analyze reversals in longer-term trends using short-term price patterns Interpret the significance of various types of gaps that occur on price charts Compare and analyze wide-range and narrow-range bars and their implications for volatility Diagram one and two-bar reversal patterns Draw common candlestick patterns and analyze their significance within a trend

10 Single Candle Lines

Interpret market psychology from candle shapes Diagram and interpret notable individual candles such as hammer, hanging man and doji Explain the importance of such candles in the context of trends Differentiate between the buying and selling activity represented by real bodies and shadows in these candles

11 Multi-Candle Patterns

Diagram and interpret notable patterns formed by multiple candles such as engulfing, stars, and windows Demonstrate the importance of the prevailing trend when interpreting candle patterns Differentiate between the buying and selling activity represented by real bodies and shadows in these candle patterns

Interpret candle patterns for support and resistance

12 Candle Pattern Forecasting and Trading Techniques

Analyze candle patterns on charts for indications of trend reversal and continuation Interpret candle patterns for support and resistance indications and confirmation Illustrate how to combine Western chart analysis with candles Employ candlestick analysis for risk management Demonstrate using candles in multiple time frames

13 Concepts in Cycle Theory

Illustrate the causes of the "mid-cycle dip" and "3/4 cycle high" Analyze the implications of an inversion Examine the cyclical explanation for rounded tops and "V-bottoms" Interpret the implications of left and right translation Calculate a centered moving average (CMA) envelope Demonstrate the use of a valid trend line (VTL)

14 Applied Cycle Analysis

Diagram the steps to a comprehensive cycle analysis Differentiate tools that find cycles from tools that phase cycles Illustrate how to identify a dominant cycle with a spectrogram Compare the phasing of smaller harmonics to larger harmonics

Section Two: Volatility Measures in Today's Financial Markets

15 Options

Explain the purpose of options markets List the major terms of an option contract Describe "the Greeks" Define implied volatility

16 Understanding Implied Volatility

Contrast historical and implied volatility when used in price analysis and forecasting Interpret implied volatility as the market's estimate of possible future asset prices Calculate single-day implied volatility List the inputs to an option pricing model

17 About the VIX Index

Analyze how put-call parity and options supply and demand affect VIX Interpret VIX as an indication of market sentiment Interpret changes in VIX as part of a market forecast Calculate expected 30-day movement of an index or a stock

Section Three: Topics in Behavioral Finance

18 Prospect Theory

Compare utility theory and prospect theory Describe loss aversion Describe the single greatest limitation of prospect theory

19 Perception Biases

Describe each of the four perception biases covered in this chapter Illustrate how each of these biases might affect investor behavior

20 Inertial Effects

Describe each of the three inertial effects covered in this chapter Illustrate how each of these might affect investor behavior

21 Analyzing Sentiment in the Stock Market

Appraise the impact of insider activity on a security's price action Compare insider buying vs insider selling Analyze short interest and the short interest ratio Interpret sentiment as drawn from surveys of investors and professionals

22 Analyzing Sentiment in Derivatives Markets

Interpret changes in futures open interest in the context of price action Analyze the Commitments of Traders report Employ options put/call ratios as sentiment indicators Interpret volatility data drawn from the options market

Section Four: Statistical Applications for Technical Analysts

23 Inferential Statistics

Compare descriptive and inferential statistics Demonstrate the use of hypothesis testing to frame statistical tests Explain confidence intervals, statistical significance and the base rate fallacy Compare coefficients of correlation and determination Differentiate between correlation and causation Examine the use of regression analysis in technical studies

24 Correlation

Compare Pearson's and Spearman's methods Describe the importance of linearity and normality to useful correlation studies Analyze the effect of outliers on a regression study

25 Regression

Interpret values generated by regression, multiple regression and tolerance calculations Review the process of selecting meaningful predictor variables for multiple regression studies

26 Regression Analysis

Analyze the concept behind the ARIMA method Describe the ARIMA process Employ the results of the ARIMA forecast to generate trading signals Demonstrate use of linear regression to generate trading signals Illustrate the use of linear regression for relative strength studies

Section Five: Technical Methods and Market Selection

27 Selection of Markets and Issues

Differentiate between buy-and-hold, position, swing and day trading and the use of technical analysis in each

Compare significant factors in trading stocks versus futures Distinguish between bottom-up and top-down approaches

Contrast secular and cyclical emphasis

Explain the basic concepts of intermarket analysis

Explain the principles behind relative strength analysis

Compare four methods for calculating relative strength

28 Intermarket Analysis

Interpret the rotation of stocks, bonds and commodities in the typical business cycle Describe methods of determining intermarket relationships Illustrate the importance of measuring correlation for portfolio diversification and asset selection

29 Relative Strength Strategies for Investing

Illustrate a general approach to a momentum strategy using relative strength Analyze the use of hedging and non-correlated assets in a long-only relative strength model

30 A Stock Market Model

Define an environmental model Contrast internal and external indicators Sketch the basic components of Davis' Fab Five model

31 A Simple Model for Bonds

Categorize each of the four indicators in Zweig's original model as internal or external Categorize the additional indicator in the modified version as internal or external, trend following or mean reversion

32 Perspectives on Active and Passive Money Management

Differentiate between alpha and beta

Compare the Efficient Market Hypothesis with general concepts in behavioral finance and with the Adaptive Markets Hypothesis

Section Six: Designing and Testing Technical Trading Systems

33 The Statistics of Backtesting

Explain the statistical challenges faced when backtesting Appraise four important statistical features of time-series price data Illustrate why log returns are often used in backtesting Analyze three statistical concerns in backtesting Differentiate between signal testing and backtesting

34 The Scientific Method and Technical Analysis

Appraise the possibilities and challenges of applying the scientific method to traditional technical analysis Analyze the three forms of the EMH as to their information content Explain "null hypothesis" as used in the scientific method State the five stages of the hypothetico-deductive method Critique the three consequences, articulated in this chapter, of adopting the scientific method in technical analysis

35 Theories of Nonrandom Price Motion

Analyze why the existence of nonrandom price motion is a premise of technical analysis Describe an "efficient market" Discuss behavioral finance as a theory of nonrandom price motion Illustrate the two foundations of behavioral finance Interpret feedback loops in price action

36 Case Study of Rule Data Mining for the S&P 500

Describe data mining and data-mining bias in testing trading rules Define and discuss data-snooping bias in testing trading rules

37 System Design and Testing

Differentiate between discretionary and nondiscretionary systems

Illustrate the advantages and disadvantages of nondiscretionary trading systems

Inventory the five initial decisions for constructing a trading system per the authors of this chapter

Distinguish between four types of technical trading systems

Compare various metrics for evaluating trading systems such as profit factor, percent profitable and average trade net profit

Differentiate methods of optimization

Define "robustness" as it applies to trading systems

Examine risk-adjusted performance metrics such as Sharpe, Sterling, and Sortino ratios
